

FI Tuner Pro

- product overview

True MAP-based Fuel Injection tuning module, designed specifically for SUZUKI motorcycles. Nothing like this on the market - it communicates with the factory ECU/ECM (bike computer) to get the fueling right, no matter what exhaust and air filter you use.

After setup, the module improves throttle response and power at all throttle positions, in the entire RPM range. The engine becomes smooth and precise. Increased torque at low RPMs allows using one gear higher than usual, which also improves fuel economy.

- » Quick and simple to install. Connects to the ECM expansion port under the seat. No need to remove the fuel tank or any fairing.
- » One module fits most Suzuki EFI motorcycles (from 1997 to 2011). Transferable to a new bike within minutes.
- » Can be mapped at 11 throttle positions, in 500 RPM increments across the full RPM range. Controls both fuel injector lines (8 injectors). Supports fuel addition as well as subtraction.
- » Quick and Easy setup: Auto cell select, immediate AFR response to cell change. Simple interface, no confusing options to select.
- » 3 independent, user-selectable maps (MAP1, MAP2, Zero MAP).
- » Native USB support. No need to install drivers and no need to use a UART bridge. The software runs on any version of Windows.
- » It is the smallest, most compact FI tuning module on the market, fits under the rider's seat.
- » Automatic software and fail-safe firmware update.
- » 30-day money back guarantee and 5-YEAR WARRANTY.
- » Best value (price/performance) for the money among the FI modules. Fully compatible with all HealTech and other aftermarket products.

Suggested retail price:

199 EUR (incl. VAT)
